DETAILED ACTION

Response to Amendment

1. This Office action is in response to the amendment filed 10/21/2009, wherein the specification has been amended and new claims 27-29 have been added. Claims 1-29 are pending in this application.

Response to Arguments

2. Applicant's arguments, see Remarks (pages 10-19), filed 10/21/2009, with respect to the rejections of claims 1-4, 8, 9, 12-15, 20, 25 and 26 have been fully considered and are persuasive. The rejections of the claims have been withdrawn.

Examiner's Amendment

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Tony Zhang on 12/11/2009.

The application has been amended as follows:

Claim 21 is amended to read:

Art Unit: 1796

A method for producing a water-soluble <u>vinyl-based</u> polymer compound having sugar chain(s) comprising a step of copolymerization of (meth)acrylic acid, a (meth)acrylamide derivative represented by General Formula (VII),

$$\mathbb{R}^{11} \stackrel{O}{\longrightarrow} \mathbb{R}^{12} \stackrel{H}{\longrightarrow} \mathbb{R}^{12}$$
 (VII)

wherein R¹¹ is a monosaccharide or an oligosaccharide residue, and R¹² is a bivalent linking group with a length equivalent to 4 to 20 methylene groups, and at least one vinyl monomer different from the (meth)acrylic acid and the (meth)acrylamide derivative in such manner that the proportions of the (meth)acrylic acid and the (meth)acrylamide derivative in the total vinyl-based eepolymers is are 20 to 80 mol% and 0.1-50 mol%, respectively.

Rejoinder

4. Claim 1 is allowable. Claims 5-7, 10, 11, 16-19 and 21-24, previously withdrawn from consideration as a result of a restriction requirement, require all the limitations of an allowable claim. Pursuant to the procedures set forth in MPEP § 821.04(a), the restriction requirement among the species of linkers I-IV, as set forth in the Office action mailed on 10/06/2008, is hereby withdrawn and claims 5-7, 10, 11, 16-19 and 21-24 are hereby rejoined and fully examined for patentability under 37 CFR 1.104. In view of the withdrawal of the restriction requirement, applicant(s) are advised that if any claim presented in a continuation or divisional application is anticipated by, or

Art Unit: 1796

includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Once the restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See In re Ziegler, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Allowable Subject Matter

- 5. Claims 1-29 are allowed.
- 6. The following is an examiner's statement of reasons for allowance: The present claims are allowable over the closest prior art references of record: Nishiguchi et al. (US 6,046,040), Nishiguchi et al. (JP 2001-220399 A), Yamada et al. (Carbohydrate Research 305 (1998), 443-461), and Huang et al. (Adv. Synth. Catal. 343 (6-7), 2001, 675-681).

The presently claimed invention is drawn to a water-soluble vinyl-based polymer comprising 20-80 mol% of (meth)acrylic acid, 0.1-50 mol% of a first vinyl monomer having a monosaccharide or oligosaccharide moiety and a linker which has a cleavable bond, and a second vinyl monomer different from the (meth)acrylic acid and the first vinyl monomer.

The Nishiguchi references and the Yamada reference disclose polymers that are somewhat similar to the claimed polymer. <u>However, none of the prior art polymers</u> contain 20-80 mol% of (meth)acrylic acid.

Huang et al. discloses a study on the manipulation of the lower-critical solution temperature (LCST) of a polymer that is used to immobilize an enzyme so as to optimize the catalytic activity of the enzyme and to facilitate the recyclability of the enzyme and the separation of a product of a reaction catalyzed by said enzyme.

However, Huang fails to teach any relationship between the amount of (meth)acrylic acid incorporated in a polymer and the LCST of such polymer.

Accordingly, the claimed polymer is not obvious to a person of ordinary skill in the art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
